## SEXED MALE BEEF SEMEN

SexedULTRA 4M Male Beef Semen, a new advancement in semen sexing technology, has the potential to greatly benefit dairy farmers seeking to optimise their on-farm production. This innovative product offers conception rates comparable to conventional semen, addressing the reduced conception rates often associated with traditional sexed products. With double the number of semen cells per straw, SexedULTRA 4M Beef has the potential to be a game-changer for dairy farmers.

# DAIRY BEEF INDEXES EXPLAINED

## Dairy Beef Index

The Dairy Beef Index (DBI) is a tool for farmers to produce higher quality beef cattle from the dairy herd, combining desirable calving attributes for the dairy herd and high carcass merit attributes for the finisher.

The DBI selects for the following:

- Easy calving, short gestation, and less calf mortality
- Heavier carcasses of greater conformation and lower fat score
- Cattle that are polled, carbon efficient and have a lower feed intake

## Commercial Beef Value

The Commercial Beef Value (CBV) can be an additional tool for farmers purchasing calves, weanlings and stores for finishing helping them identify genetically superior stock.

Animals with higher CBV ratings will showcase:

- Heavier Carcass Weights
- Improved Feed Conversion
- Reduce Age at Slaughter
- Increased Profitability

## Dairy Beef Welfare Scheme

The objective of the DBWS is to provide support to dairy farmers to improve animal health and welfare of the national herd by using better genetic merit beef sires.

Mandatory Qualifying Actions:

- Sires Must be Genotyped
- A minimum of 3 star rating for DBI within and/or across breeds
- A minimum of 3 star rating for Beef SI within and/or across breeds

Payment is €20 per calf up to a maximum of 50 calves/year
